

ISDN PRI

Combine voice, video, and data at will.

MetTel's ISDN PRI solution gives your business scalable access to the public switched telephone network. Thanks to our ISDN network we are able to carry 23 digital channels. As with all of MetTel's solutions, enjoy award-winning, 24/7/365 customer care and consolidated billing.

Features

- ISDN PRI is a high-speed connection that uses 100% digital trunks to support your voice, data and video needs, as well as Internet and remote LAN access.
- Use ISDN PRI to allocate network resources flexibly.
- Connect your digital PBX directly to the reliable MetTel network over ISDN-configured T1 1.54Mbps facilities.
- Allocate bandwidth automatically for each transmission on a call-by-call basis, eliminating the need to pre-designate certain channels for how you want them used.
- Integrate voice and data services on a single trunk line, reducing the expense of multiple trunk lines without sacrificing quality.
- Provide a digital connection to a public switched network which can enhance your equipment's power and capacity.
- With a digital connection, see an increase in voice quality compared to standard copper cables. Gain access to advanced calling features like Caller ID and more.
- Extremely stable and adaptable technology.
